

GRAPES Generates the Interest of Industry at APEC 2012

At left, Dr. Enrico Santi (front left) and Dr. Roger Dougal (back right) explain GRAPES to booth visitors.

At right, GRAPES faculty, staff and students discuss GRAPES projects with exposition attendees.

Orlando, FL (February 5 – 9, 2012) GRAPES attended the Applied Power and Electronics Conference and Exposition (APEC) for the second year this February. Joining nearly 200 other top companies, universities and research centers, GRAPES presented information on their current research projects and industrial membership opportunities. The GRAPES Center was represented by more than 10 faculty, staff and students working with the center, several of whom were attending the conference to present papers or chair sessions. GRAPES representatives explained to interested visitors how they are working to address challenges faced by companies working with grid-connected electronics, from component manufacturers to power providers.
